PROFESSIONAL SUMMARY

Honours Computer Science graduate with expertise in Artificial Intelligence, Data Science, and Full-Stack Development. Multi award winning innovator (1st place at Agenticthon and Future Fintech Hackathon), with strong experience in Python, ML/DL/NLP, and building scalable AI-powered applications using LLMs and multi-agent systems.

EDUCATION

Bachelor of Computer Science 12/2025 | Saudi Arabia, Madinah
Islamic University
GPA: 4.57/5 (Second Class Honors)

PROJECTS

AI EEG Signal Converter (Graduation Project): 01/2025 – 12/2025
Convert EEG brain waves into Arabic words and create our own dataset

- Engineered AI system classifying EEG brain signals into Arabic letters, achieving 94% accuracy.
- Curated custom EEG dataset enabling reproducible Arabic BCI research.
- Applied machine learning and bio-signal processing for feature extraction and model evaluation.

Monjez — Multi-Agent AI Platform
Agenticthon 2026 | First Place

- Won 1st place by designing and building a multi-agent AI platform that automates the conversion of research papers into structured, actionable outputs.
- Integrated large language models (LLMs) and Retrieval-Augmented Generation (RAG) to achieve high-accuracy data extraction and synthesis from academic documents.
- Architected automated agentic workflows for efficient academic data processing under tight hackathon deadlines.

Loan Recommendation Platform
Future Fintech Hackathon | First Place

- Delivered a fully functional, data-driven loan recommendation platform within a 2-day hackathon sprint.
- Conducted rapid user needs analysis to identify financial pain points and translate them into system requirements.
- Designed a recommendation engine to match users with optimal loan products based on their financial profiles.

Airline Reservation application
Software Engineering Project

- Built a unified multi-airline reservation platform with dynamic flight scheduling, administrative controls, and a relational database for user and booking management.

AI Smart Vision System for Visually Impaired
Scai Ai League Hackathon

- Developed an AI-powered vision system providing real-time match commentary and situational awareness for visually impaired users.

PROFESSIONAL EXPERIENCE

IT Support Intern 2025 – 08/2025 | Riyadh, Saudi Arabia
Alfanar Company

- Diagnosed and resolved hardware and software issues across enterprise IT infrastructure, minimizing system downtime.
- Collaborated with network administrators to monitor system performance, ensuring high availability.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript
Ai & ML: Machine Learning, Deep Learning, NLP, LLMs, Multi-Agent Systems, RAG, Data Analysis, EEG
Agentic AI Systems & Frameworks: LangChain, LangGraph, AutoGen, CrewAI, LlamaIndex, HuggingFace, n8n
Development: Full-Stack Development, UI/UX Design
Tools & Platforms: Git, GitHub, Power BI
Other: Technical Support

CERTIFICATES

KAUST AI Program Stage three	RAG and Agentic AI From IBM	Technical Support From Google	Forward program From McKinsey
